Abstract (en)

[origin: WO2017080888A1] The invention relates to a control for an unmanned flying object and to a method for controlling a flying object, in particular for a drone or a multicopter, said control comprising an assistance circuit. The control is designed to receive control commands in order to control the flying object, to change the received control commands using the assistance circuit on the basis of a configuration of the assistance circuit, and to transmit the changed control commands. The assistance circuit has an interface, and the configuration of the assistance circuit can be reconfigured using the interface.
