Abstract (en)

[origin: AU2016385256A1] A method of searching for information in a mobile device is provided. The method includes identifying at least one log for operational events based on at least one input parameter, identifying at least one element existing within the at least one log based on the at least one input parameter, fetching contents related to the at least one element from the at least one log, and displaying a portion of the contents.
