Abstract (en)

[origin: WO2017080754A1] A device (1) for sensing a state of a window or door comprises at least one first sensor unit (3) for sensing a state of an open, tilted or closed window/door by means of a potentiometer as a first sensor (4) and by means of an actuator (5) connected to the potentiometer. The device (1) further comprises at least one second sensor unit (7) for sensing another state of the window or door, said state involving vibrations or oscillations caused by the effect of force.
