Abstract (en)
[origin: US2018345053A1] The two rings are separated from one another by a first distance in a first direction and define an empty space between a first lateral surface of the first ring and a second lateral surface of the second ring. The two rings are arranged so as to allow fitting of the rod of the connector in the two rings. The rod presents a longitudinal axis coinciding with the first direction. The rod is fitted movable in rotation in the two rings and the connector is mounted movable in rotation around the rod.
