Abstract (en)

[origin: US2018265099A1] Device for supporting and guiding an aerial carrying-hauling cable of a cable lift installation, said device including a beam supporting a plurality of rotary sheaves designed to press on the cable to guide it when it is running, each rotary sheave being associated with a damping connection articulated around a pivot to form an individual module fixed individually to the beam, the different individual modules being staggered at regular intervals along the beam.
