Abstract (en)  
[origin: CN108625001A] The invention relates to a textile machine (1) having a plurality of spinning units (2) or winding units, wherein the spinning units (2) or the winding units and/or the textile machine (1) comprise atleast one assembly (3). The assembly (3) can move between at least two positions (4, 5), and the textile machine (1) comprises at least one sensor unit (6) by means of which the positions (4, 5) and/or the movement of the assembly (3) can be detected. According to the invention, the sensor unit (6) comprises an inertial measurement unit for detecting the magnitude and/or direction of the change in position and/or movement of the assembly (3).
