Abstract (en)  
A yarn winding device (2) that unwinds a yarn from a yarn supplying section (11) that supplies the yarn and winds the yarn on a winding tube (Bm) to form a package (100), the yarn winding device (2) comprising a braking device (91; 92; 93) including a braking member (75) that brakes rotation of the package (100); a chamber (76) that operates the braking member (75) by a fluid pressure inside thereof; a supply switching valve (87) arranged between the chamber (76) and a fluid supply port (84) connected to a fluid supply source; and a supply controlling section (88) that controls opening and closing of the supply switching valve (87), wherein the supply controlling section (88) causes the opening and closing of the supply switching valve (87) to be performed repeatedly alternately while changing at least one between an open duration and a closed duration of the supply switching valve (87).
