Abstract (en)
[origin: EP3376048A1] An impeller of a turbo compressor has a hub and a plurality of blades. When a distance from a rotation axis to an intersection point between a front edge and a hub edge, a distance from the rotation axis to an intersection point between the front edge and a shroud edge, and a distance from the rotation axis to a rear edge are defined as R1, R2, and R3 respectively, the distances R1, R2, and R3 satisfy relations of $0.2 \leq R1/R3 \leq 0.3$ and $0.6 \leq R2/R3 \leq 0.8$. When a dimensionless distance from the front edge with respect to a code direction is defined as M, a blade angle α is unchanged in a section where the dimensionless distance M is 0% or higher and 5% or lower, and a blade angle α_h and the blade angle α_s satisfy a relation of $\alpha_h \leq \alpha_s \leq \alpha_h + 2/3$ in a position where the dimensionless distance M is 5%.
