Abstract (en)
The present invention refers to an adjustable gas burner assembly comprising of a gas burner (107), an input mechanism (101), a central controller (102) and a gas intake unit (103). The gas burner assembly includes a plurality of outlets (105) and a plurality gas flow control mechanism (104). Further, the gas flow control mechanism (104) is connected to each outlet (105). The input mechanism (101) is configured to allow the user to provide input for adjusting gas flow rate around the gas burner (106). The central controller (102) is configured to provide control signal to the gas flow control mechanisms (104) based on the input mechanism (101). Further, the gas flow control mechanism (104) is configured to adjust the gas flow rates through the outlet (105) thereby adjusting gas flow rate around the gas burner (106).
