Abstract (en)

[origin: WO2017084956A1] The invention relates to a method for producing a support structure (2), which comprises at least one support element (11), for supporting, at least in parts, a three-dimensional object (3) to be additively manufactured on the support structure (2) by the successive selective solidification of building material layers of a solidifiable building material (4) by means of an energy beam (6), at least one removal structure (12) at which electrochemical machining can be or is initiated being formed on the at least one support element (11).
