Abstract (en)

[origin: WO2017085313A1] The invention relates to method for cutting a plurality of blocks of food which may have different cross-sections, wherein each block of food is transported on a support in a conveying track in the direction of a cutting blade which cuts off slices of food from the front end of each block of food, and said slices then fall onto a storage table where the slices are configured to a portion, the storage table having one storage track per conveying track.
