Abstract (en)

[origin: WO2017085609A1] A first movable jaw (11) is formed by a lever (15) along which a spring thrust unit is mounted (30-33). A connecting rod (23) converts the thrust of the springs (30-33) into a rotational movement of a second lever (17) which forms a second movable jaw (12). The opening of the two jaws facilitates the release of the vehicle suspended from the cable.
