Abstract (en)

[origin: WO2017085381A1] The invention relates to a box (10) comprising a one-piece divider (1) comprising: - longitudinal separation arms (15) bonded at the ends thereof to two small surfaces (4) of the box (10), and - transverse separation arms (19) bonded at the ends thereof to two large surfaces (3) of the box (10). Said transverse (19) and longitudinal (15) separation arms are pivotably connected with one another so as to move from a flat position when the box (10) is folded along two diagonally opposite edges, to an open position for receiving bottles. Concomitantly with the opening of said box (10) into an open box-shaped position, said transverse (19) and longitudinal (15) separation arms form slots for receiving one bottle each.
