Abstract (en)  
[origin: CA3008237A1] The description is given of a can lid which is intended, in particular, for drinks cans and differs from the generally known metallic can lids in that the opening region (4) is designed in the form of a tongue-like lug which is separated from the lid surface (3) by way of a microgap (8), in particular a punched gap, extending over the circumference of the lug, and which along with the tongue-like-lug base, which is connected to the lid surface, forms a bending-action bearing means (9), which takes effect during the opening operation, and in that the underside of the metallic lid is coated in a firmly adhering manner, in particular over the entire surface area, with a plastics material, in particular a plastics film (10), and this coating is of weakened design, in particular is notched, adjacent to the microgap between the tongue-like lug and lid surface.
