Abstract (en)
[origin: WO2017084999A1] The invention relates to a method for producing de novo papillae, involving steps a) providing isolated dermal hair papilla fibroblasts (DPF) from at least one dermal papilla (DP) of at least one hair follicle, b) providing isolated connective tissue sheath fibroblasts (CTSF) from at least one hair follicle, and c) co-cultivating the DPF and the CTSF in substantially non-adherent cell culture conditions in order to form spheroidal cell aggregates.
