Abstract (en)
[origin: WO2017085286A1] The invention relates to a wall connection (1) between a first wall (2) and a second wall (3). The first wall (2) and the second wall (3) are connected to one another. The first wall (2) has a strip-shaped wall recess (4). The second wall (3) is arranged by its end side in sections in the wall recess (4), such that an end side (6) of the second wall (3) is arranged entirely in the wall recess (4). The first wall (2) and the second wall (3) are connected to one another via at least one securing element (7). A width (12) of the wall recess (4) is greater than a thickness (13) of the second wall (3), whereby regions (16) are formed between edge sections (14) of the wall recess (4) and opposing wall surface sections (15) of the second wall (3), which are filled with a filling material (17) such that the wall connection (1) is closed in an air-tight manner over an entire height of the second wall (3).
