Abstract (en)

[origin: WO2017083910A1] An electronic payment system includes a wallet server storing account details of one or more payment schemes with which a user has an account; a mobile application operable to indicate to the wallet server which of the one or more payment schemes is to be pre-authorized for a transaction; and a payment card conforming to a payment card standard. Operating the payment card to effect a financial transaction effects a financial transaction using the payment scheme indicated to the wallet server by the mobile application.
