Abstract (en)
[origin: WO2017085421A1] The invention relates to a method of processing coded data representative of a sequence of digital images, with a view to their transmission to a client apparatus by way of a communication network in a first container, termed the transport container, intended to store at least the coded data of the images of the sequence, characterized in that it comprises the following steps, implemented following the encoding of an image of said sequence, termed the current image: - obtaining of the coded data representative of the current image; - extraction of at least one item of information representative of a coding structure of the current image; - updating of the first container by inserting the coded data representative of the current image into a predetermined location; - updating of a second container, termed the metadata container, by inserting said at least one item of coding structure information and an item of information representative of the location of the coded data in the transport container; and - transmission to the client apparatus of the second container; - on receipt of a request from the client apparatus, comprising at least one item of information representative of the location of the data, transmission of the coded data of the transport container corresponding to said location.
