Abstract (en)  
[origin: EP3379159A1] In an air-conditioning apparatus, which includes a refrigerant cycle circuit and a heat medium cycle circuit, a first intermediate heat exchanger exchanges heat between refrigerant and a heat medium. The air-conditioning apparatus includes a heat storage reservoir including a heat storage tank that stores the heat medium. The heat medium cycle circuit includes a heat medium flow switching device that switches a passage to connect the heat storage reservoir to the heat medium cycle circuit and allow the heat medium to flow into and from the heat storage tank.
