Abstract (en)

[origin: WO2017091414A1] A garment includes a first plurality of panels including a rigid material and a second plurality of panels including a stretch fabric material. According to an exemplary embodiment, the first plurality of panels are selectively positioned so as to correspond in location to desired anatomical regions of a wearer of the garment. According to an exemplary embodiment, the second plurality of panels are selectively positioned to facilitate independent movement of each of the first plurality of panels relative to one another.
