Abstract (en)  
[origin: TW201717804A] An apparatus (1) for producing bristle fields for brushes, in particular toothbrushes, has a transport apparatus (2) for transporting bristle bundles through at least one hollow line (3) of the transport apparatus (2) by means of a gas or air flow into perforations (4) of a provided bundle holding plate (5). Furthermore, the transport apparatus (2) also comprises a guide element (6), in the interior of which at least one continuous guide channel (10, 10a, 10b, 10c, 10d) is configured, through which bristle bundles can be fed to the perforations (4) of the bundle holding plate (5). Here, the guide element (6) and the at least one continuous guide channel (10, 10a, 10b, 10c, 10d) are produced by means of a generative manufacturing process. In order to produce the apparatus (1) according to the invention, it is provided that first of all the guide element (6) and the at least one continuous guide channel (10, 10a, 10b, 10c, 10d) are produced by means of a generative manufacturing process, in particular are printed by means of a 3D printing process, and subsequently are installed at a fastening interface (7) of the apparatus (1).
