Abstract (en)
[origin: WO2017088939A1] The invention relates to a collar-type massage device (10) provided with at least two longitudinal, dimensionally-stable massage organs (12), each massage organ (12) comprising an electric motor (14) and at least two massage elements (36) that are spaced apart from one another in the longitudinal direction of said massage organ (12) and that can be rotatably driven by means of the electric motor (14), a flexible collar housing (22) being provided which comprises at least two storage spaces (24) for the longitudinal massage organs (12), these spaces being separated from one another and oriented in the transverse direction of the collar-type massage device (10), and said spaces (24) being delimited by a body-side inner surface element (26) and a storage space delimiting surface element (28). A flexible hook-and-loop device (60) projects laterally away from the flexible collar housing (22).
