Abstract (en)
[origin: WO2017088002A2] The invention relates to a device (1) for cleaning objects, in particular workpieces, with at least one rotary nozzle head (20) which is rotatably mounted about a first axis of rotation (21), on which several nozzles (22) which are inclined at an angle and which are connected to at least one pressurised line (2) for a cleaning medium are arranged. The aim of the invention is to provide a simple way to improving cleaning performance. Said aim is achieved in that said device (1) comprises at least one arm (10) which is rotationally mounted on a first end (11), the rotational nozzle head (20) being rotationally mounted on the arm (10). Therefore, the work surface (5) of the device (1) is covered better.
