Abstract (en)

[origin: WO2017089452A1] The invention relates to a system formed by: at least one hand-held power tool, which has a housing with a handle and a drive motor arranged in the housing; a first interface, wherein the first interface is designed to receive information from at least one second external interface and/or to transmit same to at least one second external interface; and at least one additional electrotechnical product, in particular without a drive motor. According to the invention, the housing of the hand-held power tool and the housing of the electrotechnical product have a receiving opening, wherein the first interface is removably arranged in the receiving opening. In addition, the receiving opening can be releasably sealed by a cover, wherein the cover closes the housing to the outside.
