Abstract (en)

[origin: WO2017089779A1] The present invention relates to novel peptides derived from Achaete-scute homolog 2 (ASCL2), complexes comprising such peptides bound to recombinant MHC molecules, and cells presenting said peptide in complex with MHC molecules. Also provided by the present invention are binding moieties that bind to the peptides and/or complexes of the invention. Such moieties are useful for the development of immunotherapeutic reagents for the treatment of diseases such as cancer.
