Abstract (en)
[origin: WO2017088918A1] Electric unlocking system for unlocking a door, a window or the like It comprises a spring loaded striker (300) for unlocking a latch (200), striker driving means (500), a direct current electric circuit (600), and control means (800, 900) for causing the striker (300) to repeatedly connect and disconnect the striker driving means (500) as the electric circuit (600) closes and opens such as to cause the striker (300) to move back and forth to unlock the latch (200). The control means may comprise a striker sensor device (900) for actuating the striker (300) depending on its relative position inside a housing (400).
