Abstract (en)  
[origin: WO2017088848A1] The invention relates to a damper assembly (30) for a cup hinge, having a carrier part (31) and a cylinder-piston unit (61), which comprises a cylinder (62) that is axially displaceable relative to the carrier part (31) and can be reset by means of spring elements (81), and a piston rod (63) guided in the cylinder. The invention further relates to a cup hinge having such a damper assembly (30). The carrier element (31) has an integrated, elastically deformable receiving piece (42), in which the piston rod (63) can be fixed. Furthermore, on the side that is opposite the receiving piece (42), the carrier element (31) has two fixing elements (51) that are spaced apart from one another and are elastically deformable.
