Abstract (en)
[origin: CA3003379A1] The invention relates to a method and also an apparatus for presenting measurement data from multiple sensors (20) of a wind energy installation (100) and/or the components thereof using a display (10). To this end, at least one view (12) of a depiction of at least one wind energy installation and/or of at least one component of a wind energy installation and of multiple interaction elements (14a 14f) together with the view (12) are presented using a display (10). Further, each interaction element (14a 14f) is respectively assigned at least one sensor (20) of at least one real wind energy installation (100) or of at least one real component of a wind energy installation (100) by means of a controller (22), wherein the measured values from the sensor(s) (20) are retrievable particularly via the associated interaction element (14a 14f). Moreover, each interaction element (14a 14f) is respectively arranged substantially in the position, in the view (12) presented using the display (10), that corresponds substantially to the position at which the at least one sensor (20) associated with the respective interaction element (14a 14f) is arranged in the real wind energy installation (100) and/or component.
