Abstract (en)

[origin: WO2017089582A1] The present invention is device (1) which may include a steaming element (2) with a surface (3). Water is introduced to the steaming element (2) from a water inlet arrangement (5) via a baffle (6). The plate (2) may be heated to a suitable temperature by the heating element (4) for steaming the water. The surface (3) for steaming water extends below the baffle (6) such that water flows from the baffle (6) onto the surface (3) of the steaming element (2). The steaming element (2) is configured such that water flows downwardly over the steaming element (2) to be evaporated.
