Abstract (en)

[origin: WO2017089658A1] The steam generator comprises at least one element (1) produced from a nickel alloy, the alloy having the following weight contents: - Ni greater than 50%; - Cr between 14% and 45%. According to the invention, the element (1) has a metal surface layer having, at a depth p from the inner surface, a weight content of chromium $w_{Cr}(p)$, a weight content of carbon $w_C(p)$, and a weight content of available chromium $w_{Cr_dispo}(p)$, where $w_{Cr_dispo}(p) = w_{Cr}(p) - 16.61 \cdot w_C(p)$. The weight content of available chromium $w_{Cr_dispo}(p)$, taken as an average over the whole thickness of the metal surface layer from the inner surface, is greater than 0.
