Abstract (en)
[origin: WO2017089117A1] Contact element (1) for electrically connecting an electrical conductor component (2) to an electrical assembly, comprising two contact rails (11, 12) extending in a longitudinal direction (31), which are arranged one above the other and are at a distance from one another in a contact direction (32), and which are also connected to each other via a connection piece (16), wherein the connection piece (15) is arranged on same on a first side (51) of the contact rails (11, 12), and extends in the longitudinal direction (31) and in the contact direction (32) so that the contact element (1) is formed approximately in a u-shaped manner in a cross-section transverse to the longitudinal direction (31), which cross-section runs through the connection piece (15).
