Abstract (en)

[origin: WO2017129304A1] The invention relates to a method for information transmission in a communication network (2, 38). In order to achieve reliable information transmission in the communication network (2, 38), according to the invention a primary signal is received from a signal preparation unit (4) over at least one transmission channel, a secondary signal is generated by the signal preparation unit (4) from the primary signal and the secondary signal is sent by the signal preparation unit (4) to a signal processing unit (6) via two different protocol layers.
