Abstract (en)  
According to an example aspect of the present invention, there is provided A tie holder comprising: a main body (1) comprising a short edge of the main body (2) and long edge of the main body (3) that are parallel to each other, and outlined on two opposite sides by first bending lines (4) that form an obtuse angle with the short edge of the main body (2) and an acute angle with long edge of the main body (3); two first side walls (5) extend away from the first bending lines of the main body and are directed at least partially crosswise in relation of the plane formed by the main body (1) and end up to second bending lines (7) that are parallel to the first bending lines (4), first flanges (8) extending from each of the second bending lines (7) towards the opposite edge of the main body (1), third bending line (9) formed of the long edge (3) of the main body (1) line wherefrom extends a second side wall (10) to the same direction as the first side walls (5), and a fourth bending line (11) limiting the second side wall (10) and being parallel to the third bending line (9) wherefrom extends a second flange (12) towards the short edge of the main body, the flanges (8, 12) being dimensioned so that there is free space between the outer edges of the flanges (8, 12).
