Abstract (en)
An interbody implant system is provided. The interbody implant system includes an implant (1030) having an engagement surface and an instrument (1130) including a first member (1132) and a second member (1134) that is movable relative to the first member (1132). The first member (1132) is configured to capture the implant (1030) and the second member (1134) includes an interface configured to engage the engagement surface to releasably lock the implant (1030) in at least one orientation relative to the second member (1132). The at least one of the engagement surface and the interface include at least one planar face. Methods of use are disclosed.
