Abstract (en)  
[origin: CN209009035U] A system for handling packaged goods, bulk goods, and/or strapping is disclosed. The system comprises an operation and/or packaging machine. The handling and/or packaging machine has at least one handling device and an introduction frame which is associated with the handling device and has a size corresponding to the size of the bulk goods and/or strapping elements for introducing the bulk goods into the intermediate container. The handling device has a gripper head for receiving individual pieces of bulk goods, such as liquid containers, and for introducing them into intermediate containers and/or for removing them from these intermediate containers in the event of the formation of strapping elements. Furthermore, the system comprises a stationary and/or spatially relative operating and/or packaging machine-defined position of the warehouse, the warehouse has a plurality of storage positions for receiving suites, each suite being formed at least by an actuating device having a gripperhead associated with the actuating device and by an introduction frame associated with the respective actuating device and automatically lockable with the actuating device.
