Abstract (en)

[origin: EP3382261A1] A variable light emission modular lighting system (1), comprising at least one base element (2) comprising a support structure (3) and a lighting body (4), supported by the structure (3) and provided with a plurality of elementary light sources (5) defining respective modules of the system (1); and a control unit (13) operating on the elementary light sources (5); the control unit (13) controls individually each elementary light source (5) so as to selectively operate at least one operation parameter of each elementary light source (5).
