Abstract (en)
[origin: EP3382459A1] A developing cartridge (1) includes: a developing roller (30); a casing (10) for accommodating therein developing agent; a storage medium (51) including an electric contact surface (511); a holder (52) movable along with the electric contact surface in a first direction crossing the electric contact surface, the holder being movable between a first position and a second position relative to the casing in the first direction; and a pressure member (53) for pressing the holder while being moved in a second direction crossing the first direction when the holder is moved between the first position and the second position. A distance in the first direction between the electric contact surface and the pressure member when the holder is positioned at the first position is greater than a distance in the first direction between the electric contact surface and the pressure member when the holder is positioned at the second position.
