Abstract (en)  
[origin: WO2017095312A1] The present disclosure relates to a flexible cover strip for a storage system including a carrier rail (1) having a U-shaped cross section with first and second parallel rows (3, 5) of elongated substantially identical slots (7) in a front portion to accommodate a suspension element such as e.g. a bracket. The cover strip has an abutment face (17) and an exterior face (31), and a plurality of projections (19), rising from the abutment surface of the strip in first and second parallel rows matching the slots of the carrier rail, such that the cover strip can be fitted on the front portion with the projections entering the slots, and wherein at least some of the projections are provided with a snap element (27) at their distal ends, which snap elements prevent the cover strip from falling off the rail.
