Abstract (en)

[origin: WO2017093015A1] The invention relates to a device (1) for producing a brewed beverage, in particular coffee, comprising a filter vessel (2) and a water supply line (4) which is arranged above the filter vessel (2) and which has at least one central opening (5) and at least one lateral opening (6) that is offset to a central region of the filter vessel (2). At least one switchable valve (11) is provided by means of which the water supply line (4) can be controlled via the at least one central opening (5) or the at least one lateral opening (6), and the water supply line (4) can be controlled via the at least one switchable valve (11) depending on the filling quantity of the filter vessel (2) and the set strength of the brewed beverage. The invention further relates to a method for producing a brewed beverage.
