Abstract (en)
[origin: WO2017093071A1] The invention relates to a mobility support system (100), comprising: a drive unit (112), which is designed to drive at least one wheel (121, 122, 131, 132) of the mobility support system (100); a modular structural frame, wherein the modular structural frame comprises a central module (110) and at least one side module (120, 130), wherein the drive unit (112) is arranged in the central module (110) and/or the at least one side module (120, 130), and wherein at least one wheel (121, 122; 131, 132) is associated with the side module (120, 130); and the central module (110) and the at least one side module (120, 130) each have at least one interface, by means of which the central module (110) can be mechanically and/or electronically reversibly coupled to the at least one side module (120, 130).
