Abstract (en)

[origin: WO2017093659A1] The invention relates to a device (10) for detecting a non-compliant object, comprising a plate (20), having a portion (30) that is recessed when viewed from above, on which plate the object is intended to move, and individually-inclinable tabs (32E, 32I, 32C) intended to be raised by the said object, at least one of the tabs being folded back against the recessed portion in the absence of the said object, and a detection circuit suited to determining whether the amplitudes by which the tabs are raised exceed a threshold value.
