Abstract (en)
[origin: WO2017092806A1] A spring assembly (80) positions a liner (56) with respect to a housing (12) of a centrifugal blast wheel machine (10). The spring assembly (80) is mounted on a front wall (50) of the housing (12) and configured to exert a spring force against the liner (56) to push the end liner (56) against side wall liners (58, 62). The spring assembly (80) includes a spring base plate (82) attached to the front wall (50) of the housing (12), at least one spring (92) configured to engage the spring base plate (82), a spring bracket (104) configured to secure the spring (92) in place with respect to the spring base plate (82), and at least one fastener (84) to secure the spring bracket (104) to the spring base plate (82). The spring (92) is disposed between the spring base plate (82) and the spring bracket (104).
