Abstract (en)
[origin: WO2017093893A1] The invention relates to a container (2, 19) for pasty or semi-liquid products, having a substantially tubular shape and extending along a longitudinal axis (A). The container comprises: a first longitudinal end (50) which is closed and flattened; a second longitudinal end (51), opposite to the first longitudinal end (50) and comprising an opening (14) and a dispensing element (15); a first side wall (60) and a second side wall (61), opposite each other and interposed between the first longitudinal end (50) and the second longitudinal end (51). The container comprises, at the first side wall (60) and second side wall (61), a plurality of first lines of weakness (5, 5', 5'', 5''') which are transverse to the longitudinal axis (A) and which define a plurality of corresponding zones (7, 8, 10, 11) which are selectively squeezable, in twos, towards each other and progressively from the first longitudinal end (50) to the second longitudinal end (51), defining corresponding stable configurations for the zones (7, 8, 10, 11). Furthermore, the container comprises, at the first side wall (60) and second side wall (61), a plurality of second lines of weakness (3, 9, 11a, 20) transverse to the first lines of weakness.
