Abstract (en)

[origin: WO2017094013A1] A perforated structure mountable onto a seabed comprises: a plurality of prefabricated perforated modules integratable into the structure and at least one connector interconnecting corner portions of the prefabricated perforated modules. Each prefabricated perforated module has a corner portion comprising a concave surface such that the corner portions being integrated together into the structure form a cavity to be filled with a concrete. The connector comprises a crosspiece having three arms orthogonal to each other. Each arm has a cross-like cross section. The crosspiece has reinforcing members distributed within the concrete.
