Abstract (en)
[origin: CA3005684A1] The invention relates to a formwork part (26a-c) comprising a compensation element. The compensation element has a longitudinal support and two transverse supports connected to the longitudinal support. An outer support is movably arranged on the transverse supports. Additionally, at least one central support can be secured to the transverse supports so as to be releasable from the transverse supports. The longitudinal support, the outer support, and/or at least one central support have at least one support head receiving area preferably at both ends, in particular in the form of a connection projection, in particular at least two support head receiving areas, preferably in the shape of connection projections. The connection projections can be hooked into ceiling supports (16) of the ceiling formwork (10). The invention further relates to a ceiling formwork (10) comprising such a formwork part (26a-c) and a formwork element (14). The formwork element (14) preferably has at least one support head receiving area, in particular in the form of a connection projection, which can be hooked into the ceiling support (16) of the ceiling formwork (10). The ceiling formwork (10) can have the ceiling support (16), and the ceiling formwork (10) can have a dual support.
