Abstract (en)
[origin: WO2017093574A1] The invention relates to a navigation method and system comprising at least one address database in which a plurality of unique addresses are stored, at least one map database in which maps to the addresses of the address database are stored, at least one electronic device, in particular a mobile device, which can be connected to the address database and the map database, and a display device which can display at least one address in a map. The address stored in the address database comprises address information on at least one building. The address database and/or the map database includes a virtual segmentation of the at least one building, and the address information within the building includes segment information based on the virtual segmentation.
