Abstract (en)
The present invention discloses a quickdraw device, comprising quickdraw buckles and a woven tape for connecting the adjacent quickdraw buckles. The woven tape is arranged in a hollow cylinder shape. Ports are penetrated on both ends of the woven tape. At least one port of the woven tape is arranged to be curled along a length direction of the woven tape. An inner diameter of the woven tape is equal to an inner diameter of the port. In such design, tensile strength of the woven tape can be effectively enhanced through the curled woven tape. Without sewing, processing is more convenient and quick.
