Abstract (en)

[origin: CN108622124A] An air treatment device (10) comprises a first air re-circulation pipe (20A) from a first room (12A), a first supplying pipe (32A) which supplies treated air to the first room (12A), a second air re-circulation pipe (20B) from a second room (12B), and a second supplying pipe (32B) which supplies the treated air to the second room (12B). The device comprises a common air treatment unit (14). The air treatment unit comprises a chamber (16) which comprises a first inlet (18A) and a second inlet (18B) which are respectively connected with the first re-circulation pipe and the second re-circulation pipe (20A,20B), an outer air inlet (22) and an outlet (24); and a first treatment loop (26A) and a second treatment loop (26B) which are respectively accommodated in the first area (25A;125A) and the second area (25B;125B). The two treatment loops treat the air from the outlet (24) and supply to the first supplying pipe (32A) and the second supplying pipe (32B).
