Abstract (en)
The present invention refers to a household apparatus, particularly to a cooling apparatus comprising a cooling space with at least an upper compartment, an at least a lower compartment, and with a compartment for preparing cooling air, wherein said cooling space can be closed by at least one door, and at least one circulating means to force air circulation in said cooling space. It is provided for that a deflecting wall (6) is formed at its side facing a back wall (3) with at least one rib (12) extending approximately in vertical direction of a receptacle, wherein said at least one rib (12) is in direct contact with a back wall (3), thus, creating between the back wall (3) and the deflecting wall (6) a plurality of approximately vertically extending channels (7, 7') for air circulation.
