Abstract (en)
[origin: WO2017097784A1] A visible and adjustable hanging-bracket group (10) for anchoring a wall cupboard (11) to a wall, comprising a structure (16) carrying a protruding arm (14) equipped with a hook (15) suitable for being hooked to a support (50) fixed to said wall, a first and a second regulation mechanism (17,17') of the position in depth and inclination, respectively, of said protruding arm (14), a flange (18) extending from said bearing structure (16) for fixing said hanging bracket (10) to a shoulder (12) of said wall cupboard (11), at least one hole for the passage of fixing means (19) of said hanging bracket (10) to said shoulder (12) being provided in flange (18), said flange (18) also comprises a pair of elements (20) resistant to shear stress protruding from said flange (18) towards said shoulder (12) of said wall cupboard (11), said pair of elements (20) resistant to shear stress collaborating with a pair of fixing means (19) for a stable positioning of said hanging bracket (10) on said shoulder (12) of said wall cupboard (11), each resistance element of said pair of elements (20) resistant to shear stress being arranged in a different position with respect to a relative hole (44) for each fixing means of said pair of fixing means (19), wherein said elements (20) resistant to shear stress are elements in the form of bushings or cylindrical plugs, having a circular section, that extend from said flange (18).
